

Position available – Full Stack Developer Full-time, January 2015

Who are we?

Bluenove is an open innovation consulting and software development firm with activities in open data, collective intelligence, social innovation and corporate innovation. Our offices are based in Montréal and Paris.

The project

[Assembl](#) is an open source software project ([GitHub](#)) and is being developed to enable large-scale discussions online. Moving away from the shallow interactions facilitated by traditional social media channels, Assembl facilitates deep, complex discussions. Think large-scale discussions about writing a European Constitution, or a discussion around product innovation with the entire staff of a large multinational company. This is fairly uncharted territory so be prepared to think creatively, and deal with a multitude of unconventional puzzles.

Who are we looking for?

The project is in the launch phase. This means you will have the opportunity to influence the direction that we are headed in. In addition to providing input on a variety of development decisions, you will be responsible for the development of the API connections between Assembl and existing social networks and internal company chat systems (Jabber, Jive, Yammer, etc.). We need a motivated, independent worker who isn't afraid of new challenges. The project is being implemented with several international partners so the ability to collaborate with others remotely and across different time zones is required.

The following skills are required:

- Expertise in Javascript, Python, and Backbone
- Familiarity with APIs and REST architecture
- Experience with several or all of social media APIs, RequireJS, Marionette, SQLAlchemy, Pyramid

The following skills are assets:

- Experience with D3 technologies
- Familiarity with the semantic web
- Interest in 'common good' products

Recent graduates are encouraged to apply as well as experienced candidates.

Our clients and partners

Bluenove has a variety of diverse clients across Europe and North America including Michelin, La Poste, Pernod-Ricard, Orange, Microsoft, and more. Our research partners include MIT and Open University. Our partners in social innovation include Imagination for People, Ashoka, Purpose, and the Institut du Nouveau Monde.

Contract details

The position is for a full-time full stack developer based in our Montréal offices beginning January 2015. Salary will be based on skills and experience level. The position may require some travel to

France (Paris). Please send your CV, letter of intent, and GitHub profile to Francois Burra at francois.burra@bluenove.com
